Daniel Prosi

daniel.prosi@nyu.edu · NYU Abu Dhabi · www.danielprosi.com

RESEARCH INTERESTS

Firm-interactions, Production Networks, Structural Transformation, Macroeconomics of Growth and Development, Network Econometrics, Causal Inference under Interference

EMPLOYMENT

Postdoctoral Associate, NYU Abu Dhabi *since 2026*
OECD, External Consultant, part-time *2022–2026*
OECD, Consultant *2021*
Development Cooperation Directorate

EDUCATION

Ph.D., Economics, European University Institute *2021–2026*
M.Sc., Economics, Eberhard-Karls Universität Tübingen *2018–2020*
M.Sc., Economics & Econometrics, University of Nottingham *2018–2020*
B.A., International Relations, TU Dresden *2015–2018*
Erasmus exchange Université de la Réunion *2017*

GRANTS AND AWARDS

STEG Small Research Grant *2023*
Amount: GBP 12,422; Role: PI
GEP CEPR Postgraduate Conference Best Paper Award *2026*
EUI Economics Department Best Second Year Paper Award *2023*
German Academic Exchange Service, PhD scholarship *2021–2026*
Scholarship Studienstiftung des Deutschen Volkes *2018–2020*

CONFERENCES AND PRESENTATIONS

Microeconometrics Working Group (EUI), GEP-CEPR Postgraduate Conference Nottingham, World Trade Dialogue Hamburg, GDE/EDEG Kiel, CESifo Junior Workshop on International Economics	2026
ITSG Milan, World Trade Forum Florence, DevEconMeet Florence, Vilfredo Pareto Doctoral Workshop Torino, Kiel-Aarhus Workshop	2025
STEG Early Career Workshop (online), The Galbino Project	2024

WORKING PAPERS

FDI, Forward Linkages, and Services Inputs

with Bernard Hoekman, Marco Sanfilippo, and Rohit Ticku

This paper provides evidence of spillover effects from Foreign Direct Investment (FDI) through forward linkages. It analyses granular information on the universe of firm-to-firm transactions and inward FDI in Rwanda. Event-studies reveal substantial and persistent effects on value-added, employment, and productivity of domestic firms after beginning to source from foreign-owned enterprises. These effects are more pervasive than those associated with selling to foreign-owned firms – the backward linkages emphasised in the literature. FDI in Rwanda is motivated by the access to regional markets. This contrasts with the access to cheap input factors for export-driven investment in contexts where spillovers through backward linkages are salient. In a market-seeking context of investment in an input-constrained economy, forward linkages are the dominant channel for spillover effects. Foreign-owned firms provide higher-quality intermediate inputs than domestic suppliers. This applies more strongly to specialised business and professional services that are difficult to import.

Propagation over Production Networks with Endogenous Market Power

This paper studies how changes to firm productivity or size propagate over a production network. It derives an endogenous measure of market power when firms internalise their position in the production network to extract monopoly rents. The paper first explores the relation between network position and endogenous markups under general non-parametric production functions. This separates economically meaningful channels of interaction from restrictions introduced by the choice of functional form of production and the competition regime. It then studies how changes to productivity or firm-size propagate over the network when markups are endogenous. The forward equation of productivity gains and the backward equation of demand creation are complemented with a horizontal equation that captures changes in endogenous market power. Using granular administrative data from Rwanda and an instrumental variable strategy based on exogenous border closures, the paper tests the empirical validity of the derived measures. It then uses the universe of firm-to-firm interactions in the country to study the network-position of Foreign Direct Investment (FDI) in Rwanda and assess the general equilibrium effects of FDI on the domestic economy via efficiency gains, demand creation, and changes to the structure of competition.

Synthetic Controls for Treatments on Networks

This paper proposes a synthetic control estimator to identify treatment effects in panel data when units interact over an observed network, treatment is endogenous, and outcomes are subject to network interference. The proposed estimator balances not only pre-treatment outcome trajectories for treated and synthetic control groups, but also their position on the observed network.

POLICY PUBLICATIONS & OTHER FIELDS

TEACHING AND RESEARCH ASSISTANTSHIPS

TA Microeconometrics *2023–2024*
PhD-level taught by Fabrizia Mealli and Alessandro Tarozzi EUI

RA Robert Schuman Centre *2022*
Prof. Bernard Hoekman EUI

RA Chair of International Macroeconomics *2019–2020*
Prof. Gernot Müller Tübingen University

RA Behavioural Economics Group *2019*
Prof. Ulrich Schmidt Kiel Institute

TA Chair of Econometrics *2018*
Undergraduate-level taught by Prof. Bernhard Schipp TU Dresden

TA Statistics *2016–2017*
Undergraduate-level taught by Dr. Jan Rudl TU Dresden

SUMMER SCHOOLS

Studienzentrum Gerzensee Advanced Course *2024*
Data Research Camp Florence *2024*
SIDE Summer School on Network Econometrics *2022*
Oxford Summer School on Networks in Economics *2018*

ACADEMIC SERVICE

Referee: Review of World Economics

SKILLS

Languages: English, German *(native)*, French *(C1)*, Italian *(B1)*
Coding: Julia, R, Stata, LaTeX(proficient); Matlab, Python (literate)
