ORCID for Journal Editors

Trust Markers found in ORCID records provide valuable context that helps streamline research integrity workflows, identify appropriate reviewers, reduce burden on your reviewers and staff, and protect the reputation of your journal.

Peer review and editorial service recognition

Acknowledging reviewers' and editors' expertise in their ORCID record provides valuable recognition for all their contributions, not just publications — reviews, editorial board membership, etc.

Enhanced discoverability for your publications

Adding publication data to your authors' ORCID records increases discoverability for your journal, makes the data available to other systems (e.g. university, funder, and indexing systems) and enables researchers to claim credit for their contributions.

Know your contributors

Collect authenticated ORCID iDs for your authors, co-authors, and reviewers to better understand their expertise and experience. Trust markers found in ORCID records provide valuable context that helps streamline research integrity workflows, improves decision making and reduces burden on your staff. This is especially helpful for co-authors, who may be at an early stage of their careers.

Robust reviewer selection

Utilizing ORCID profile data makes reviewer selection process easier and helps to discover possible conflicts of interest. When recruiting new reviewers, editors can assign reviews based on previous contributions and activities.

Increase trustworthiness of your publications

Adding publication data (which includes Trust Markers) to your authors', co-authors', and reviewers' ORCID records enhances the overall strength of the scholarly record and protects the reputation of your journal.

Decreased friction for contributors

Researchers are used to the process of signing in with ORCID. It reduces the frustration and burden of managing multiple credentials and makes it easier for them to engage with your system. Linking authors and co-authors between different systems saves time during submission, review, and reporting.

Talking to your...

..colleagues

"ORCID data from authors and co-authors' records can give us valuable context about who they are, and data from peer reviewers' records can make the selection process easier. It can also let us give credit to reviewers and editors for the work they do.

"ORCID is an easy-to-use, online profile system popular among researchers and peer reviewers that provides trustworthy data that has been added by authenticated third parties — and available in a summarized view — that can help us protect the reputation of our journal.

...researchers

"As a researcher [or co-author or peer reviewer] who wants to [gain recognition for your research and publish your work] [gain recognition for your expertise and contributions] [receive credit for your work as a peer-reviewer or editor] ORCID is a free, easy-to-use, online profile where you can gather all your professional affiliations, research outputs, and activities in one place.

"Since so many systems you use are connected to ORCID, you'll likely save a lot of time and effort when you submit manuscripts, or apply for funding, when you give them permission to write data to your record.

Do you already use one of the ORCID-certified manuscript submission systems?

Adopting ORCID into your workflows could be as easy turning the functionality on!
