# ORCID for Publishers

**By integrating your publisher systems with ORCID, you can streamline workflows for authors, editors, and reviewers alike. ORCID improves the overall value of your books and journals to the community, helping ensure greater retention of your authors and readers.**

## Strengthen research integrity

When you add the trusted data you hold about your authors, co-authors, and reviewers, you improve the trustworthiness of their ORCID records—and strengthen the robustness of the entire scholarly record.

## Know your authors

Allow your authors, co-authors, and reviewers link their ORCID records to your system so you can better understand their academic records. ORCID can also help with OA policy compliance and transformative agreement management by acting as an open, trusted source of affiliation data.

## Better reviewer selection

Embedding Record Summaries into your workflows can make the reviewer selection process easier and helps to discover possible conflicts of interest. When recruiting new reviewers, editors can assign reviews based on expertise and previous service.

## Peer review recognition

Add peer review data to your reviewers' ORCID records to acknowledge them for all their contributions. They can use this information elsewhere; when they apply for funding, for example.

## Enhanced discoverability for your authors

By contributing validated publication data to your authors' and co-authors' ORCID records, you increase their discoverability and help them claim credit for their work. ORCID data can also be re-used to create author profile pages on your website to further promote researchers and their publications

## A more consistent user experience

Providing an ORCID single sign-on reduces login frustration and the burden of managing multiple credentials. Linking authors between different systems saves time during submission, review, and reporting.

# Talking to your...

## ...authors and co-authors

**"ORCID makes it easy to publish, and gain recognition for your research outputs or for your peer review service. As a researcher [or co-author, or peer reviewer] who wants to gain recognition for your research and publish your work [or, gain recognition for your expertise and contributions,] ORCID is a free, easy-to-use, online profile where you can gather all your professional affiliations, research outputs, and activities in one place.**

**"Since so many systems you use are connected to ORCID, it can save you a lot of time and effort when you submit manuscripts, or apply for funding, when you when you give trusted organizations permission to add data to your record.**

## ...colleagues

**"As publishers, we need to trust, but verify, that our authors and co-authors are who they say they are.**

**"ORCID is an easy-to-use, online profile system popular among researchers (including authors, editors and peer reviewers) that provides trustworthy, validated data, added by trusted organizations and available in an easy-to-understand Record Summary, that can help us ensure the integrity of our publications and our publishing processes.**
