ORCID and OJS

All you need to know about adopting ORCID and OJS

Erik Hanson, Public Knowledge Project
December 17, 2024

SFU

Outline

- Introduction to PKP, OJS, OMP, and OPS
- Overview of ORCID functionality
- Demo of OJS
- Questions

Who: Erik Hanson

- What: Software developer
- Where: Vancouver, Canada
- When: Since 2019
- Why: Further open access and open science/research

What is PKP?

Public Knowledge Project

Established by Dr. John Willinsky in 1998.

A research and development project that creates and supports open infrastructure to improve the quality, reach, and diversity of scholarly publishing.

Develops open source software for scholarly publishing, including Open Journal Systems, Open Monograph Press, and Open Preprint Systems.

What is OJS?

Open Journal Systems

The world's most widely used open source journal publishing software.

In 2023 more than 50,000 journals used OJS to publish more than two million articles in 150 countries and 60 languages.

What is OJS?

Use to manage all aspects of the scholarly publishing workflow, including:

- Submission
- Review
- Production
- Publication
- Distribution/Discovery

ORCID functionality in OJS

Key features

- Integrate with OJS editorial and production workflows
- Authenticate users' ORCIDs as part of publication process
- Display ORCID status publicly

ORCID functionality in OJS

Public vs. Member API

- Public API: Authenticate ORCIDs and display in OJS (read)
- Member API: Push verified contributions/updates to ORCID profile (read and write)

Demo of OJS

ORCID functionality in OJS includes:

- Author workflows
- Reviewer workflows

Thank you!
